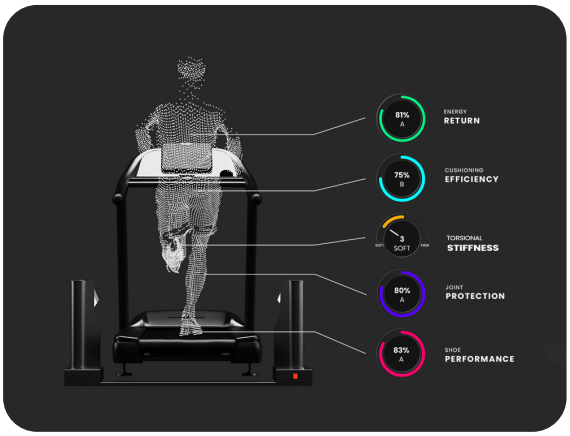
Recommendations and Higher Sales

Positioned behind a treadmill, the RUNRIGHT-3D **running gait analysis and shoe fitting system**, uses dual 3D cameras to capture the runner's movement and build a precise 3D skeletal model. The gait analysis and shoe fitting system analyses **44 biomechanical metrics**, intelligently weighted and grouped into five key Macrometrics, to deliver fast, accurate gait insights and shoe recommendations — with **no markers, no cables, and no wasted time**.

cloud, including the shoes your customers have tried on and didn't like. This helps you know your customer's preferences and dislikes, making it easier to find the right shoes when they return. The software tells your customer how well they performed in each shoe, at the speed they prefer to run at and the professional gait analysis system scores the shoe's performance, cushioning, injury protection and energy return.

Use Our Running Gait Analysis and Shoe Fitting System to Provide Better Shoe Recommendations and Higher Sales



Positioned behind a treadmill, the RUNRIGHT-3D **running gait analysis and shoe fitting system**, uses dual 3D cameras

to capture the runner's movement and build a precise 3D skeletal model. The gait analysis and shoe fitting system analyses **44 biomechanical metrics**, intelligently weighted and grouped into five key Macrometrics, to deliver fast, accurate gait insights and shoe recommendations — with **no markers, no cables, and no wasted time**.

Results are delivered in **just 20 seconds** on a tablet, supported by an integrated **Customer Management System** and a **Digital Customer Report** that enhances the in-store experience, builds trust, and drives conversion.

Shoe fitting technology for running retailers

All the running gait analysis and shoe fitting data is saved in the cloud, including the shoes your customers have tried on and didn't like. This helps you know your customer's preferences and dislikes, making it easier to find the right shoes when they return. The software tells your customer how well they performed in each shoe, at the

speed they prefer to run at and the professional gait analysis system scores the shoe's performance, cushioning, injury protection and energy return.

RUNRIGHT-3D is an innovative and professional 3D running gait analysis and shoe fitting system that changes how we sell shoes.

High tech shoe fitting technology for running retailers. A turnkey solution.

Hassle Free Recording

RUNRIGHT -3D is a turn-key professional gait analysis and shoe fitting solution that requires no additional purchases. Simply place it behind your treadmill, turn it on and start recording. With RUNRIGHT-3D, you can enjoy a hassle-free recording experience. Say goodbye to the need for computers, cameras, capture cards, special lighting, or A/V cables. Just place it behind

RUNRIGHT-3D Instantly Elevates Your Game

your treadmill, turn it on and start recording like a pro.

‘Over the Air’ update system

After calibration, the RUNRIGHT-3D professional gait analysis system can be easily bolted down to the floor and once this is done, all you need to do is switch the system on to enjoy its seamless functionality. RUNRIGHT-3D has an ‘Over the Air’ update system via the Google Play Store, which makes installing and maintaining the system hassle-free.

All Great Running Shoe Sales Start With A Great Analysis

How it Works in Practise

A Quick Overview Video

THE RUNRIGHT-3D APP

Our App delivers the experience and expertise that your competitors and on-line stores can't match.

Our app combines a remote control and SmartScreen into one comprehensive tool. Its primary functions are to record, analyse and report data. Analysing is straightforward, as all metrics are scored against established norms for male and female runners in 5K and 10K events and the results are presented in a clear and precise manner.

Each running shoe is scored

An Intuitive Interface

The user interface and workflow are not only intuitive but also rich in data. Subsequently, you can find everything necessary to help you identify the perfect running shoe for your customers starting with the main **macrometric** features but moving on if needed, to an in-depth exploration of each **micrometric** detail.

All shoes recorded during the session are displayed in a vertical stack, making comparison easy and this provides both you and your

customers with precise, objective data to make a buying decision.

Create a customer 'fit picture'

After the running gait analysis and shoe fitting session, you can mark the shoes that were purchased and note the reasons why others were not selected. This allows for a quick review of all the shoes your customer previously considered during their next visit. This information is invaluable, as it creates a clearer 'fit picture' of your customers' needs before you begin the sales process on subsequent visits.

The app also displays a 3D skeleton of your customer running, along with helpful hints and tips to improve their performance with each running shoe. In addition, each micrometric feature includes a shortcut to a video explanation.

Calibration and updates

Within the app's settings, you can also easily calibrate the system. Updates for the Running Station are delivered over the air and app updates are available via the Play Store.

The RUNRIGHT-3D app provides a data-driven running analysis with shoe fitting recommendations.

PERSONALISED CUSTOMER REPORTS

Build your customer's trust and keep them coming back, with their friends!

After the in-store running analysis and shoe fitting session, customers automatically receive a detailed digital email report, to view on their mobile device. This includes the results of their analysis as well as information about the shoes they purchased. It features a breakdown of micrometric results and provides suggested recommendations for customers who wish to improve their shoe performance.

The three most relevant micrometrics are included in order of importance:

- Performance Micrometrics
- Protection Micrometrics
- Efficiency Micrometrics

Each metric includes a link to an explainer video that has detailed notes on how to improve that metric and,

therefore how to get the most out of that shoe.

News Flash: Digital Email Reports are an unexpected marketing tool. One early adopter states that his customers are actively recommending his store to their friends, simply because the email reports are such a fantastic feature.

Each digital report links to videos explaining the metric and how they can improve.

THE CUSTOMER MANAGEMENT SYSTEM (CMS)

Our CMS will help you build your brand, build deeper customer loyalty, manage shoe sales more effectively, appraise staff and brand performance.

RUNRIGHT-3D is more than just another Gait Analysis Sytem. It ensures your customers get the level of service they demand and by keeping their details, you can connect, promote and offer special offers. Our CMS will help you future proof your stor and dominate the market.

Sell more shoes

RUNRIGHT-3D has a powerful CMS, enabling you to maintain a detailed record of your customers' purchases. Its dashboard allows you to gain valuable business insights wherever you are, as long as you have a Wi-Fi connection.

In addition, the RUNRIGHT-3D database also allows you to sort your sales data by brand, model, shoe size, and customer so you can offer loyalty discounts on models your customers have already purchased. This improves customer appreciation and helps you clear out unsold inventory at the end of the season.

Gain insights into customer purchase data

With RUNRIGHT-3D you can also aggregate customer purchase data to gain valuable insights into trends and preferences. Subsequently, this information can help you anticipate demand for certain products, plan inventory, and adjust your marketing strategies to meet your customers' needs better.

The real-time dashboard

Perhaps the most potent feature

of RUNRIGHT-3D is its **real-time dashboard**, which provides instant insights into your company's performance. You can track your staff's progress, monitor sales of different brands and models, and even export the data to compare the sales of other shoes and analyse the outcomes of those sales.

Brand specific size curves

And furthermore, as we keep sales data, we can create **brand-specific size curves**. Simply choose a brand, model, gender and press select – a spreadsheet is then produced; from here just add the intended number of shoes you wish to purchase and the spreadsheet does the rest.

Find out more about the CMS ›

We explored several systems before receiving a recommendation for RUNRIGHT-3D. Since it arrived, we haven't looked back. Our customers have

become our greatest advocates, actively recommending us to their running friends. The Digital Report has been a standout feature. The bottom line is that our sales have significantly increased!
